

ZYROO INTERNSHIP PROGRAM

DATA ANALYTICS INTERNSHIP

WEEK 4

Ride Analytics & Revenue Intelligence Platform

Week 4: Power BI Dashboard Development

Project Progress

Week 2: We analyzed ride demand by date, month, hour, weekday/weekend, location, and customer behavior.

Week 3: We analyzed revenue by different dimensions and evaluated driver performance using important KPIs.

Current Stage: We now turn these analysis results into an interactive **Power BI dashboard** that presents the project's key findings clearly.

1. Understand the Business Problem

Raw analysis is useful, but a business needs a quick visual overview of its performance.

In Week 4, your task is to convert the findings from Week 2 and Week 3 into a simple and interactive dashboard.

The dashboard should help answer:

- How many rides are happening?
- How much revenue is generated?
- When is ride demand highest?
- Which locations are busiest?
- How are drivers performing?
- What important patterns can the business see?

2. Dashboard Requirements

Use:

- **Power BI Desktop**
- Cleaned ride-hailing dataset
- Week 2 demand and customer analysis
- Week 3 revenue and driver analysis

Your dashboard should contain:

- KPI cards
- Charts
- Tables
- Filters
- Business insights

Keep the dashboard **simple, clean, and easy to understand**.

3. Data Import & Data Check

Import your cleaned dataset into Power BI.

Check:

- Column names
- Data types
- Date and time
- Fare
- Distance
- Rating
- Ride status
- Pickup location
- Drop-off location
- Driver ID
- Customer ID
- Payment method
- Ride type

Fix obvious data errors before creating the dashboard.

4. Create Basic Measures

Create simple measures for:

- Total Rides
- Completed Rides
- Cancelled Rides
- Total Revenue
- Average Fare
- Average Rating
- Completion Rate
- Cancellation Rate

Use the actual column names from your dataset.

5. KPI Cards

Create KPI cards for the most important business metrics.

Recommended KPIs:

1. **Total Rides**
2. **Completed Rides**
3. **Cancelled Rides**
4. **Total Revenue**
5. **Average Fare**
6. **Completion Rate**

Place the main KPIs at the top of the dashboard.

6. Ride Demand Analysis

Create visuals for:

7. Rides by Date
8. Use a **Line Chart** to show ride trends over time.
9. Rides by Hour
10. Use a **Column Chart** to identify peak hours.
11. Rides by Weekday
12. Compare demand across different days.
13. Top Pickup Locations
14. Show locations with the highest number of rides.
15. Top Drop-off Locations
16. Show the most common destination areas.

7. Revenue Analysis

visuals for:

- Monthly Revenue
 - Revenue by Payment Method
 - Revenue by Ride Type
 - Revenue by Location
 - Average Fare
- Use charts that make comparisons easy.

8. Customer Analysis

Include:

- Total Unique Customers
- Customer Ride Frequency
- New Customers
- Repeat Customers

Create at least one visual that clearly shows customer behavior.

9. Driver Performance Analysis

Create a driver performance table.

Recommended columns:

Driver	Total Rides	Completed	Cancelled	Revenue	Rating	Completion Rate
--------	-------------	-----------	-----------	---------	--------	-----------------

Use the actual values from your dataset.

You can sort drivers by:

- Revenue
- Completed rides
- Rating
- Completion rate

10. Dashboard Filters

Add interactive filters such as:

- Date
- Ride Status
- Pickup Location
- Ride Type
- Payment Method
- Driver

Test each filter and make sure the dashboard visuals respond correctly.

11. Dashboard Layout

Use a simple structure:

Top Section

- KPI Cards

Middle Section

- Ride Demand
- Peak Hours
- Daily/Monthly Trends

Lower Section

- Revenue
- Customer Analysis
- Driver Performance

Keep the dashboard clean and avoid putting too many charts on one page.

12. Visualization Tasks

Use the correct visual for each purpose:

- **Line Chart:** Trends over time
- **Bar Chart:** Category comparisons
- **Column Chart:** Time/category comparisons
- **Card:** Important single-number KPI
- **Table:** Detailed driver/customer information

Do not add charts just for decoration.

Every visual should answer a business question.

13. Business Questions

Your dashboard should help answer:

1. When is ride demand highest?
2. Which pickup locations are busiest?
3. Which drop-off locations are most common?
4. Which days have the highest demand?
5. How much revenue was generated?
6. Which payment method generates the most revenue?
7. Which ride type generates the most revenue?
8. Which drivers generate the most revenue?
9. Which drivers have high cancellation rates?
10. Are repeat customers an important part of the business?

14. Business Insights

Write at least **5 insights** based on your dashboard.

Each insight should explain what you found.

Example:

Evening hours have the highest ride demand, indicating that more driver availability may be required during this period.

Another example:

A small number of pickup locations contribute a large portion of total rides.

Important: These are examples only. Use your actual dataset values

15. Business Recommendations

Write at least **3 practical recommendations**.

Possible areas:

- Peak-hour driver availability
- High-demand locations
- Customer retention
- Driver performance
- Cancellation reduction
- Payment preferences

Every recommendation should be connected to a finding from your dashboard

16. Week 4 Deliverable

By the end of Week 4, submit:

- Completed Power BI dashboard
- 6+ KPI cards or meaningful summary metrics
- Ride demand visuals

- Revenue visuals
- Customer analysis
- Driver performance analysis
- Interactive filters
- 5+ business insights
- 3+ business recommendations
- Dashboard screenshots

17. GitHub Submission

Update your existing project repository.

Add:

- Power BI dashboard file, if allowed
- Dashboard screenshots
- Week 4 report
- Business insights
- Recommendations
- Updated README

Keep everything properly organized.

18. Suggested GitHub Structure

ride-analytics-revenue-intelligence/

```
|
|— data/
|— sql/
|— python/
|
|— powerbi/
|   └─ ride-analytics-dashboard/
|
|— reports/
|   └─ week-04-powerbi-dashboard/
|
|— screenshots/
|   └─ week-04/
|
```

└─ README.md
└─ requirements.txt

19. README Update

Add a **Week 4** section to your README.

Include:

- Dashboard purpose
- Dashboard features
- KPI metrics
- Screenshots
- Main business insights
- Recommendations

Keep the README simple and professional.

20. Submission Checklist

1. Power BI dashboard completed
2. KPI cards created
3. Demand analysis completed
4. Revenue analysis completed
5. Customer analysis included
6. Driver performance included
7. Filters tested
8. 5+ business insights written
9. 3+ recommendations written
10. Dashboard screenshots added
11. README updated
12. GitHub repository link submitted

21. Week 4 Success Criteria

By the end of this week, you should be able to:

- Build a basic Power BI dashboard from a cleaned dataset.
- Create useful KPI cards and charts.
- Use filters to explore data interactively.
- Convert previous analysis into visual dashboards.
- Explain business insights using actual data.
- Give practical recommendations based on data

22. Final Week 4 Flow

Cleaned Data → Demand & Customer Analysis → Revenue & Driver Analysis → Power BI Dashboard → Business Insights → Recommendations

Next Stage: Week 5

Week 5 will move from dashboard development to the **final Business Intelligence report**.

You will review the complete project, document the important findings, finalize recommendations, improve GitHub documentation, and prepare the project for **final presentation and evaluation**
