

ZYROO DATA ANALYST INTERNSHIP

Task 01: Onboarding & Environment Setup

Objective

Prepare your data analytics environment, join the official Zyroo communication channels, configure your analysis tools and GitHub workflow, and complete a basic data analysis test.

1. Zyroo Onboarding

- Read the internship guidelines
- Understand the 8-week internship structure
- Understand task submission and evaluation
- Understand the GitHub-based workflow
- Connect with your assigned mentor
- Join the official Zyroo communication channels

2. Official Zyroo Links

Website: <https://zyroo.org>

Browse Internships: <https://zyroo.org/internships>

For Companies: <https://zyroo.org/companies>

LinkedIn: <https://www.linkedin.com/company/zyro-co/>

WhatsApp Community: <https://chat.whatsapp.com/EfivEcF14cJ8pWnbW9OmWh>

WhatsApp Channel: <https://whatsapp.com/channel/0029Vb8m3OK5Ui2W8xNLgy0F>

Contact: <https://zyroo.org/contact>

Help Center: <https://zyroo.org/help>

3. Required Data Analyst Tools

- **Microsoft Excel**, Data cleaning, formulas, PivotTables and basic dashboards
- **Power BI Desktop**, Data modeling, KPI reporting, interactive dashboards and visualization
- **Python**, Data analysis and automation
- **Jupyter Notebook**, Interactive analysis and documentation
- **Pandas + NumPy**, Data manipulation and numerical analysis
- **Matplotlib + Seaborn**, Data visualization
- **SQL environment**, Queries, filtering, joins, grouping and aggregation
- **Git + GitHub**, Version control and internship submissions
- **VS Code**, Editing scripts, notebooks and project files

4. Official Tool Links

Microsoft Excel: <https://www.microsoft.com/microsoft-365/excel>

Microsoft Power BI: <https://www.microsoft.com/power-platform/products/power-bi/desktop>

Python: <https://www.python.org/downloads/>

Jupyter: <https://jupyter.org/install>

Pandas: https://pandas.pydata.org/docs/getting_started/install.html

NumPy: <https://numpy.org/install/>

Matplotlib: <https://matplotlib.org/stable/install/index.html>

Seaborn: <https://seaborn.pydata.org/installing.html>

SQLite: <https://www.sqlite.org/download.html>

DB Browser for SQLite: <https://sqlitebrowser.org/dl/>

Git: <https://git-scm.com/downloads>

GitHub: <https://github.com/>

VS Code: <https://code.visualstudio.com/download>

5. Python Data Analysis Environment

Create a virtual environment:

```
python -m venv .venv
```

Activate it, then install the core analysis libraries:

```
pip install pandas numpy matplotlib seaborn jupyter openpyxl
```

Start Jupyter:

```
jupyter notebook
```

6. SQL Setup

Use SQLite for Week 1. It is lightweight and does not require a database server. Use DB Browser for SQLite or another SQL client. Verify that you can create a database, run a SELECT query, filter rows, group data, and calculate an aggregate.

```
SELECT category, COUNT(*) AS total
FROM sales
GROUP BY category;
```

7. GitHub Setup

Create a repository named:

```
zyro-data-analyst-internship
```

Recommended structure:

```
zyro-data-analyst-internship/
├── week-01/
│   ├── environment_test.ipynb
│   ├── sql_test.sql
│   └── evidence/
├── README.md
├── requirements.txt
└── .gitignore
```

Push your Week 1 work to GitHub.

8. Basic Data Analysis Test

Complete one small test using a simple CSV dataset. The goal is to verify that your environment works before Week 2.

- Load a CSV file with Pandas
- Display the first 5 rows

- Check rows, columns and data types
- Check missing values
- Calculate at least one summary statistic
- Create one simple chart
- Save the notebook in the Week 1 folder

9. Verify Before Submission

- Zyroo website reviewed
- WhatsApp Community joined
- WhatsApp Channel joined
- Excel installed and tested
- Power BI Desktop installed and opened
- Python installed
- Jupyter installed
- Pandas and NumPy installed
- Matplotlib and Seaborn installed
- SQL environment tested
- Git installed
- GitHub repository created
- Basic data analysis test completed
- Week 1 work pushed to GitHub

10. Submission

Submit only your GitHub repository link.

Do not send screenshots, files, or proofs separately. Your GitHub repository must contain all required Week 1 work and evidence.

- Python version screenshot
- Git version screenshot
- Power BI installation/opening screenshot
- Excel setup or test screenshot
- SQL test screenshot or SQL file
- Jupyter/data analysis test screenshot or notebook
- Proof of joining the Zyroo Community
- Week 1 files, notebook, SQL test and documentation

11. Optional LinkedIn Post

Optional: Post your Zyroo offer letter on LinkedIn and tag the official [Zyroo LinkedIn page](#).

Sample: "Excited to begin my Data Analytics internship journey with Zyroo. Looking forward to learning, analyzing real-world data, building dashboards, and developing practical skills. ■■"

Completion Criteria

Task 01 is complete when: your data analytics environment is configured, your basic data analysis and SQL tests work successfully, you have joined the required Zyroo communication channels, all required evidence is stored in your GitHub repository, and you submit only the repository link.

Week 2: The first real-world Data Analytics task begins.
